CAREER OBJECTIVE

- Analytical and detail-oriented Data Science postgraduate aspiring to build a career as a Data Scientist and AI/ML Engineer.
- Strong foundation in Python, SQL, machine learning, and exploratory data analysis, with hands-on experience in data preprocessing, feature engineering, model development, and predictive analytics.
- Passionate about building intelligent systems and applying data-driven approaches to solve real-world problems and support impactful decision-making.

EDUCATION

M.Sc. (Computer Applications) – Swami Ramanand Teerth Marathwada University, Nanded (2023–2025 | 73%).
B.Sc. (Chemistry, Computer Science, Mathematics) – Hutatma Jaywantrao Patil College, Himayatnagar (2020–2023 | 75%).

Technical Skills

- Python, SQL.
- Machine Learning, Supervised & Unsupervised Learning, Regression & Classification Models.
- NLP, Deep Learning, Artificial Neural Networks (ANN), CNN, RNN, openCV
- Google Colab, Jupyter Notebook, VS Code.

SOFT SKILLS

Analytical Thinking | Problem Solving | Adaptability | Teamwork | Time Management | Continuous Learning.

ACHIEVEMENTS

• Secured 2nd Rank in M.Sc. Computer Application.
• Black Belt in Martial Arts (Karate).
• Silver Medalist (International Karate Championship – New Delhi.)

LANGUAGES: Marathi (Fluent) | Hindi (Fluent) | English (Professional)

INTERESTS: Swimming | Singing | Playing Guitar

Training: Kapil IT Skill Hub Ameerpet Hyderabad

PROJECT HIGHLIGHTS

Water Potability Prediction using Machine Learning

- I built an end-to-end supervised machine learning pipeline to predict water safety using physicochemical features.
- The project included data cleaning, preprocessing, exploratory analysis, feature scaling, and handling class imbalance to improve model performance.
- I developed and compared Logistic Regression, KNN, Decision Tree, and Random Forest models using multiple evaluation metrics.
- The final model achieved around 69% accuracy and strengthened my practical skills in solving real-world ML problems.

Deep Learning Project Deployed | Healthcare Stroke Risk Prediction (ANN)

- I developed and deployed an end-to-end Deep Learning project using an Artificial Neural Network to predict stroke risk from healthcare and lifestyle data.
- The solution includes a complete preprocessing pipeline for mixed features, probability-based prediction, and a real-time interactive web application.
- The model analyzes key patient attributes such as age, glucose level, BMI, hypertension, heart disease history, and smoking status. This project strengthened my practical expertise in ANN design, evaluation, and cloud deployment for real-world healthcare prediction systems.
